Argumedo, A., Tung, T. T., and Chang, K. I.: Rheological Property Measurements of Drag-Reducing Polyacrylamide Solutions, 449

Balmer, R. T. and Hochschild, D. J.: Hyperbaric Fano Flow of Newtonian Fluids, 165

Bloch, R., Chang, W. V., and Tschoegl, N. W.: The Behavior of Rubberlike Materials in Moderately Large Deformations, 1

——, ——, and ——: Strain Independent Nonlinearity in Peroxide-Cured Styrene–Butadiene Rubber, 33

Chan, Y., White, J. L., and Oyanagi, Y.: A Fundamental Study of the Rheological Properties of Glass-Fiber-Reinforced Polyethylene and Polystyrene Melts, 507

Crochet, M. J. and Naghdi, P. M.: On Thermomechanics of Polymers in the Transition and Rubber Regions, 73

Davis, W. M. and Macosko, C. W.: Nonlinear Dynamic Mechanical Moduli for Polycarbonate and PMMA, 53

Derman, D., Zaphir, Z., and Bodner, S. R.: Nonlinear Anelastic Behavior of a Synthetic Rubber at Finite Strains, 239

Elbirli, B. and Shaw, M. T.: Time Constants from Shear Viscosity Data, 561

Goddard, J. D.: Tensile Behavior of Power-Law Fluids Containing Oriented Slender Fibers, 615

Han, C. D. and Funatsu, K.: An Experimental Study of Droplet Deformation and Breakup in Pressure-Driven Flows through Converging and Uniform Channels, 113

Hedley, W. H., Olt, R. G., Holboke, L. E., and Wurstner, A. L.: Flow of Gases and Liquids through Ultrafine Capillaries Having Diameters between 1.5 and 60 Micrometers, 91

Heywood, N. I. and Richardson, J. F.: Rheological Behavior of Flocculated and Dispersed Aqueous Kaolin Suspensions in Pipe Flow, 599

Hyun, J. C. and Ballman, R. L.: Isothermal Melt Spinning—Lagrangian and Eulerian Viewpoints, 349

Lamb, J.: Viscoelasticity and Lubrication: A Review of Liquid Properties, 317

Lindrose, A. M.: A Technique for Determining Relaxation Functions in Linear Viscoelastic Materials, 395

Malhotra, R. C.: See Sharma, R. S.

Mark, R. and Findley, W. N.: Nonlinear Variable Temperature Creep of Low-Density Polyethylene, 471

McCarthy, R. V.: An Improved Rheometer Design Used to Measure Viscoelastic Properties of Polymer Melts, 623

Nakajima, N. and Collins, E. A.: Flow Behavior of Raw Elastomers Containing Crosslinked Particles, 547

Phan-Thien, N.: A Nonlinear Network Viscoelastic Model, 259

Reddy, K. R. and Tanner, R. I.: On the Swelling of Extruded Plane Sheets, 661

Richardson, J. F.: See Heywood, N. I.

Schmidt, L. R.: Velocity Field Rearrangement in Stagnation Flow Leading to Diverging Radial Flow Between Parallel Plates, 571

Schoukens, G. and Mewis, J.: Nonlinear Rheological Behaviour and Shear-Dependent Structure in Colloidal Dispersions, 381

Seshadri, V.: See Sharma, R. S.

Sharma, R. S., Seshadri, V., and Malhotra, R. C.: Turbulent Drag Reduction by Injection of Fibers, 643

Takahashi, M., Masuda, T., and Onogi, S.: A Stress Dependent Constitutive Equation, 285

Tanner, R. I.: See Reddy, K. R.

Tsai, C. F. and Darby, R.: Nonlinear Viscoelastic Properties of Very Dilute Drag Reducing Polymers Solutions, 219

Whipple, B. A. and Hill, C. T.: On the Relative Optical Errors in Fluid-Flow Visualization Through Transparent Surfaces, 181

Whitcomb, P. J. and Macosko, C. W.: Rheology of Xanthan Gum, 493

Wiff, D. R.: RQP Method of Inferring a Mechanical Relaxation Spectrum, 589

Willey, S. J. and Macosko, C. W.: Steady Shear Rheological Behavior of PVC Plastisols, 525

Yang, T. M. T. and Krieger, I. M.: Comparison of Methods for Calculating Shear Rates in Coaxial Viscometers, 413

Journal of Rheology
Transactions of The Society of Rheology

Information for Contributors

1. Manuscripts for the *Journal of Rheology* should be submitted to the Editor, R. R. Myers, Department of Chemistry, Kent State University, Kent, Ohio 44240, or to any of the Assistant Editors. Address all other correspondence to Journal Production Department, John Wiley & Sons. Inc., 605 Third Avenue, New York, New York 10016.
2. It is the preference of the Editors that papers be published in the English language.
3. Manuscripts should be submitted in triplicate (one *original*, two carbon copies), typed *double space* throughout and on one side of each sheet only, on a *heavy* grade of paper with margins of at least one inch on all sides.
4. A short synopsis (maximum length 200 words) is required for all papers. This synopsis should be carefully prepared, for it is automatically the source of most abstracts. The synopsis should be a summary of the entire paper, not the conclusions alone, and it should precede the main body of the paper.
5. The paper should be reasonably subdivided into sections and, if necessary, subsections.
6. Authors are encouraged to use the International System of Units (SI Units) and their standard abbreviations where possible.
7. The references should be numbered consecutively in the order of their appearance and should be complete, including authors' initials and—for unpublished lectures or symposia—the title of the paper, the date, and the name of the sponsoring society. Please compile references on a separate sheet at the end of the manuscript. Abbreviations of journal titles should conform to the practices of *Chemical Abstracts*; refer to the *Bibliographic Guide for Editors & Authors* published by the ACS.
8. Please supply numbers and titles for all tables. All table columns should have an explanatory heading.
9. It is particularly important that all figures be submitted in a form suitable for reproduction. Good glossy photographs are required for halftone reproductions. For line drawings (graphs, etc.), the figures must be drawn clearly with India ink on heavy white paper, Bristol board, drawing linen, or coordinate paper with a very light blue background. The India ink lettering of graphs must be large, clear, and "open" so that letters and numbers do not fill in when reduced for publication. It is the usual practice to submit drawings that are twice the size of the final reproductions; the maximum final size of figures for this journal is $4\frac{1}{8} \times 6\frac{1}{2}$ in. It is the author's responsibility to obtain written permission to reproduce material which has appeared in another publication. If in doubt about the preparation of illustrations suitable for reproduction, please consult the publisher at the address given above in paragraph *1* and ask for a sample drawing.

10. Please supply legends for all figures and compile these on a separate sheet.
11. Authors are cautioned to type—wherever possible—all mathematical and chemical symbols, equations, and formulas. If these must be handwritten, please print clearly and leave ample space above and below for printer's marks; please use only ink. All Greek or unusual symbols should be identified in the margin the first time they are used. Please distinguish in the margins of the manuscript between capital and small letters of the alphabet whenever confusion may arise (e.g., k, K, κ). Please underline with a wavy line all vector quantities. Use fractional exponents to avoid root signs.
12. Authors who honor the page charge will receive 100 reprints of their articles without charge. Additional reprints can be ordered and purchased by filling out the form attached to the galley proof. Page proofs will not be supplied.
13. Under the provisions of a new U.S. copyright law, effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be explicitly transferred to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer agreement to be used for the *Journal of Rheology* is printed in this issue. Additional copies are available from the Editor or authors may photocopy the agreement from the journal. A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire" the agreement must be signed by the employer.)

Manuscripts and illustrations not conforming to the style of the *Journal of Rheology* will be returned to the author for reworking, thus delaying their appearance.
